

Mulch Digger/Lifter

Lift mulch easy and economically!

A rugged yet easy to handle Mulch Retriever, the 1295 is designed for the small grower. Take the easier, less hassle way of getting your land ready for the next crop.

Check the features shown above. They include the two front coultter blade discs which cut a furrow on each side of the plastic mulch. The mulch lifting unit has three parts - 1.) the vertical leg which rides in the furrow; 2.) the cutting wings that "reach" under the plastic and 3.) the lifting rods which raise up each edge of the plastic. With both sides lifted and the soil loosened, the mulch and soil can dry out, to be picked up later and loaded on a wagon.

The mulch Digger/Lifter can loosen one to two acres per hour depending on conditions. You can be relieved of the slow back breaking plastic mulch "clean-up" job. When you figure labor costs you can easily see how this machine can pay for itself in a short time. Tough, solid

construction will give you years of economical, trouble free service.

Call or write today. Put this labor saving, money saving equipment to work for you.

SPECIFICATIONS:

Weight: 650 lbs.
Size: 75" W x 51"L x 49"H
Framing: 2-1/2" Steel Tubing
Gauge Wheels: 8" Wheel Dia.;
16.5" Overall Tire Dia; 6.5" Tread Width.
